

Toolbox for Good Marine Litter Management in the Aquaculture Sector

Aquaculture Europe '21 • October 4-7th, 2021

Preventive measures for averting the discarding of litter in the marine environment from the aquaculture industry

Why AQUA-LIT?

“There are no global estimates of the amount of plastic waste generated by the fisheries and aquaculture sector.”

FAO, technical paper 615, 2017

“Aquaculture is expected to be the sector that meets future demand for food, predicted to rise by 40 percent by 2030”

The State of World Fisheries and Aquaculture 2018

Why AQUA-LIT?

AQUA-LIT thus aims at **increasing the understanding, awareness and availability of solutions that tackle marine littering**, so the increase on aquaculture production doesn't imply an increase on marine littering.

Put simple

Existing tools

Marine Litter inventory

A **solid knowledge base on marine litter from aquaculture activities**. This database includes information on the main types of debris as well as the quantities in which they occur in the marine environment, identifying specific sources of marine littering coming from aquaculture activities.

Regional maps on aquaculture litter

Sea basin maps generated for visualising information on the **geographic position of aquaculture facilities**, in combination with the **quantitative data of aquaculture-related litter**. These maps are provided for the three sea basins and give an initial indication of the source-sink story of aquaculture-related litter, which are a useful tool for the various stakeholders and policy makers.

MARINE LITTER INVENTORY

[PLASTIC]

The item inventory is a solid knowledge base on marine litter from aquaculture activities which is divided into general [A], specific [B] and other potential [C] items. Each item is characterized by an identification

e.g. mussel socks with
cotton strands

SUPPORT MEASURES

Related Barriers:

There is a lack of standardised criteria for environmental monitoring systems (e.g. in Spain each Autonomous Community deals with their own regulation).

There is a lack of monitoring systems for marine litter and for non-organic marine litter from aquaculture activities specifically.

There is a lack of specific data related to material losses from aquaculture activities.

There is a lack of specific information on the impact of marine litter from the aquaculture sector to showcase the problem.

There is a lack of knowledge to identify aquaculture items in marine litter collections.

The standardised forms used at a European level to collect information about the floating marine litter and the debris located on the seafloor are not complete or updated as they lack item categories that are frequently found in the Mediterranean Sea.

The current monitoring performed and promoted by the government is not efficient enough in Spain.

Related Good Practice:

M&Q GP4.1

The Spanish Ministry for the Ecological Transition and the Demographic Challenge (MITECO) is involved in the marine litter monitoring. Spanish MITECO is involved in the marine litter monitoring through two departments. Firstly, the Directorate for the Coast and the Sea has been involved in the monitoring of the marine litter on beaches for more than 12 years. Currently (2020), there are 26 beaches included in the monitoring scheme, which is performed by

Dunkerque

Type of waste

Domestic waste, food scraps, wood, paper, cardboard, glass, oil filters, batteries, fluorescent tube, paint bucket, solvents, ashes, oil, polluted fuel, polluted waters

Is there a fee?

No information available

Is there any limitation (e.g. forbidden type of waste)

For liquid waste, the ship must get in touch with approved companies. The port doesn't directly manage liquid waste. For dangerous waste, the port must be advised. For medical waste, the ships must contact an approved company

AQUA-LIT

Tackling Aquaculture Debris

HOW CAN POLICY-MAKERS TAKE ACTION?

AUGUST / 2020

AQUA-LIT

Tackling Aquaculture Debris: How can policy-makers take action?

Marine litter, including plastic, is an increasing concern globally, since it causes harm to marine environment, coastal communities, and maritime activities, along with effects on economics, human health and safety. Therefore, it is considered a large challenge, which needs to be tackled.

Aquaculture and fishing activities are responsible for about 65% of the plastics released into the sea. However, very few measures to reduce marine litter, current and proposed, are related to aquaculture.

How AQUA-LIT can contribute for AVERTING THE DISCARDING OF LITTER IN THE MARINE ENVIRONMENT FROM THE AQUACULTURE INDUSTRY?

AQUA-LIT
Public Participation
Learning Labs & Interview

58 important recommendations for Policy-makers
Contribute to a healthy and sustainable ocean

Key Policy Recommendations

SUPPORT, namely technical, financial and organizational.

EDUCATION, TRAINING, COMMUNICATION and COOPERATION.

MONITORING losses and litter in the environment with innovative approaches and guidelines.

WASTE MANAGEMENT with waste collection points, deposit schemes, incentives, upcycling processes, waste flows.

PRECONDITIONS FOR LICENSING.

REGULATIONS through creation and inspections perform.

POLICY developing national law and incorporating and implementing policies in national laws.

HARMONISATION in licensing procedures and certification systems, of decommission.

CERTIFICATION including the standardisation of the labelling systems.

Identify the SHARED RESPONSIBILITY.

Identify the PRODUCER RESPONSIBILITY.

Identify the FARMER / USER RESPONSIBILITY.

Include criteria for CORPORATE SOCIAL RESPONSIBILITY (CSR).

MARINE DEBRIS MANAGEMENT through synergies among all the involved stakeholders.

DATA QUANTIFICATION on aquaculture debris.

RESEARCH and INNOVATION, enhancing knowledge and promoting interdisciplinary and international collaborations.

New MATERIALS and new DESIGNS for aquaculture equipment
